

ABSTRACT

Since technology is getting enhancement, a lot of invention and innovation are playing a major role to human being. A computerized system is one of the invention and innovation which is going to replace the manual system of which will be obsoleted one day in the future. Being seen the importance and followed the technology pace, the Ordering Information System is, therefore, designed to help the growth of the air-condition business. To support the completeness and powerful of this application, several reports can also be generated as output of integrated data for planner and management to use as tool in planing, forecasting and decision making.
