

## ABSTRACT

Time Management System is developed for TAWANAOO Company Limited. Currently many problems have occurred due to the operation in the existing system. The proposed Time Management Information System is designed to provide the accurate and timely information to the management and staff. The study emphasizes computerization of time management information processing. The objective is to design the computerized information system for various works in order to help users record data, retrieve data and print reports more quickly and accurately.

Time Management System is developed based on the network computing technology. The area under study of this system includes time management record, prepare record and report generation. The analyzed report will be an effective tool to provide better information to the management.
