

## Acknowledgments

This thesis would not have been possible without the support of Churdchai Cheowtirakul, Ph.D., Dean of the Biotechnology at the Assumption University, who gave me an opportunity to pursue the degree abroad. This has given me an opportunity to learn basic science and translational research about food allergies in collaboration with many leading physicians and scientists. I appreciated many wise suggestions and encouragement from Anadi Nitithamyong, Ph.D. and Romanee Sanguandeeikul, Ph.D. I would also like to thank Mr. Wirach Nimmanwathana, Managing Director of Mah Boonkrong Dairy Goats Co.,Ltd, who supervised and talked me through food allergies and food industries. He provided valuable guidance for my future career.

Hugh Sampson, M.D., Director of the Conduits - Institutes for Translational Sciences, Director of the Jaffe Food Allergy Institute, Dean for Translational Biomedical Sciences, and Professor of Pediatrics, gave me an invaluable opportunity for research at the Jaffe Food Allergy Institute at the Mount Sinai School of Medicine in New York City. He has been supportive from my first day at Mount Sinai. I am very fortunate to have been given a chance to work with his team.

Anna Nowak-Węgrzyn, M.D., Associate Professor of the Pediatrics at the Mount Sinai Medical Center and my mentor, has given me valuable advice on how to be a persistently hard-working graduate student and reliable scientist. These past four years, I would especially thank her through her wise encouragement as well as her insightful and constructive criticisms to strengthen my scientific ideas. Since I have been working with her, I can see my progression as a student, scientist and woman. I have been learning how to be a professional in the workplace to efficiently establish cooperative and respectful working relationships, and the importance of honesty in efficient research.

I would like to thank Kirsi Järvinen-Seppo, M.D,Ph.D. and Andrea Vereda, M.D,Ph.D. who kindly helped me in milk allergy study. I gratefully acknowledge Janet Butler for milk and egg allergy projects, Rosalia Ayuso M.D,Ph.D. for the shellfish allergy research, Galina Grishina M.S. for molecular biology guidance, Luda Bardina M.S. for laboratory techniques, Wayne Shreffler M.D,Ph.D., Bert Ruitter Ph.D. and Steven Yoo M.S. for their willing guidance in the laboratory, Alexander Grishin Ph.D. for radioactive training, Oksana Yershov M.S. for tissue culture training, Michelle Mishoe B.S. for ImmunoCAP training, Natasha Ilievski M.P.A. for

helping in administrative work, and all of laboratory/clinical research coordinators at the Jaffe Food Allergy Institute for your cooperation. It has been a pleasure to collaborate with all of you.

Many thanks go to the Nutricia Foundation, the Netherlands for providing the one-year international research fellowship. Due to your kind support and open-mindedness, I was able to unhesitatingly delve into the research of allergies at this exceptional research team at the Mount Sinai School of Medicine. Following the mission of the foundation, I as a young woman scientist, have participated for research in food allergies, and would like to contribute this knowledge to work.

Lastly, I would like to wholeheartedly thank my family who have always understood and supported me while I have studied and worked far away from home.
