

ABSTRACT

Today, companies work in an exciting and complex environment that is constantly changing. Business organizations are changing their methods of operation and management structures to meet the demands of a highly competitive environment. This includes the usage of information technology.

All business processes are done manually at Indo Royal Company. By implementing the proposed system, most business activities or processes in the revenue cycle will be computerized. The data will not be saved into folders anymore but will use files that connect each other on a database. The accuracy of data by using a Computerized Information System is insurable. There is improvement in the quality of collection, input, storage and processing of data with regards to the organization's business activities and transactions. It means efficiency and effectiveness are provided. The adequate controls and protection from any threats in the revenue cycle also provided. The processing of data into information and reports (output) are accurate and timely, hence useful for decision making.

The implementation of the proposed system can further improve the efficiency and effectiveness of Indo Royal Company's activities by improving the quality and reducing the operating costs, improve the efficiency of operations by providing more timely information, improve decision making by providing accurate information to the right person at the right time, shares knowledge and expertise thereby improving operations and even providing a competitive advantage, help the organization to improve profits by improving the efficiency and effectiveness of its value system.
