

## ABSTRACT

For the trend, the information technology has the most important in the business. The demand of accurate and timely information is increasing especially accounting information.

BB Trading Co., Ltd. is the one of BB group that has many businesses in Thailand such as beverage, food, agriculture industry and restaurant. This company acts as a middleman for their group that purchases products from their group and sell overseas.

The current existing financial accounting information system is based on manual and some computerized systems. Most of data are recorded on paper, while some parts are kept in the Microsoft Excel, which create many problems in controlling the flow of documents and providing unreliable, inaccurate and inadequate information.

The new proposed system will be developed to replace the manual and some computerized systems. All data are kept in the database server. It will reduce the number of staffs, solve the problem of the problem of manual system. The scope of the project involve Purchasing, Receive Goods & Payment, Ordering, Receivable, and General Ledger

The new system that is developed by using the system analysis and design concept is designed by considering the users' need.
