

ABSTRACT

Widsanu Clinic would like to implement a new computerized system in order to replace the previous manual operation. This is because the board of the clinic would like to provide an excellent service to the patients.

The analysis team is responsible for proposing a new clinic information system to be used in the clinic. They need to find the opportunity to introduce the new computerized system to the clinic. The team starts from studying the existing system and perceiving problems of the current operation. Then, the requirement analysis, system design and implementation are followed. The final outcome from the study is an information system that could serve as information needed by the board.
