

Abstract

This project reveals the result adept and applied accessory. And bring them to joint with personal computer so that order control passes the parallel of computer.

This project “RF mini car project control by DTMF signal” that can control by computer program. And they are able to run as you like it pass through your PCs. You still possible to control this mini car even though you are at the far place that cannot reach immediately.

In this project, we will be using DTMF signal to control a device (for example the motor in this project). First we will simulate the DTMF signal by computer and send it to the DTMF decoder that will send the control signal to control our circuit.
