

ABSTRACT

Children's books are a good beginning of learning and have a great influence on children's attention and contribute to the development of children's intelligence. It can teach valuable lessons while still making it fun and enjoyable for children. The content presented in this children's book is about marine pollution and the conservation of the marine environment. These are problems that have risen from the past to the present and are likely to continue in the future if the world's population is not aware enough of these issues. I realize that cultivating and raising awareness is difficult to get started with adults. These things should be instilled from childhood in order to become a basic habit for them when they grow up.

Koh Tao is a popular tourist place with beautiful scenery, especially underwater scenes and this place has been named as the island with a strong community committed to sea life conservation. I interviewed the local villagers and the environmentalist of Koh Tao to collect information for writing as the main content and gain a lot of useful information. They are delighted that more and more people are aware of these issues. Moreover, this information will be passed on to the children as well. I also received advice from professional illustrators. They suggested ways to make books more interesting and engaging to children. It is extremely useful for the next process. Working on Thesis II is the beginning of the concept of book design. Coming up with many ideas helps to pick up the good things of each concept and can be brought together. The composition of the illustration and the content is very important. The contents of the book must not be too boring for children. Choosing environmentally friendly materials was another factor that I paid a lot of attention to when making this book.

I would be honored if parents would choose to pick up this book for their children to read and I hope that readers will be entertained and have a good sense of conservation of the marine environment.
