

## ABSTRACT

This Unitholder Registration System (URS) Development Project was development to improve the existing functions at Thai Farmers Asset Management Co.,Ltd. (TFAM) Presently all function of Registration Department .Registration Department has duty to control on documentary details (Information) and send to work at Thai Farmer Bank - Head Office or Thai Farmer Bank - Silom .

The Proposed System was design for efficiency process as reduce time consuming , accurate data and report . The tool of structured analysis such as context diagram, data flow diagram, and data dictionary are used for analysis phase. The detail design is carried out through file design, software design, screen design and report design. The main components of this newly developed Unitholder Registration System including entry data, generate instruction for workstation and letter for unitholder as well as calculating registrar fee for each period.

The software package was written in Microsoft Access on window. Finally each activities of new system try to serve operation and make users friendly. User can produce input, process and generate output more quickly and efficiently.
